Professional Summary

Full-Stack Developer with 1 year of experience building responsive web applications using React.js, Node.js, Express.js, and MongoDB. Skilled in RESTful APIs, authentication, and database design.

Technical Skills

Frontend: HTML, CSS, JavaScript, React.js, Bootstrap, Material UI

Backend: Node.js, Express.js, RESTful APIs, Authentication (Passport.js), Middleware

Database: MongoDB (Mongoose), MongoDB Atlas

Tools: VS Code, Git, GitHub, Postman

Experience

Trainee Frontend Developer

Jan 2025 – Present

ServiceKaralo.com

Delhi, India

- Developed a “Service Listing Booking” module using HTML, CSS, and JavaScript, where users can view services and submit booking requests.
- Built complex reusable UI components including navbar, service cards, and category sections with mobile-friendly layout.
- Integrated Web3Forms for booking submissions and added basic form validation through JavaScript.
- Supported UI improvements, fixed bugs, and collaborated using Git and GitHub.

Projects

Wanderlust-Travel (*Node.js, Express.js, MongoDB Atlas, Mongoose, EJS, Bootstrap, Passport.js, Cloudinary, Mapbox, Joi*)

- Built a full-stack vacation rental platform following MVC architecture with clean separation of concerns.
- Developed RESTful CRUD APIs for Listings and Reviews with server-side validation using Joi.
- Implemented authentication using Passport.js (Local Strategy) and role-based authorization via custom middleware (isOwner, isReviewAuthor).
- Configured secure session management with MongoDB session store (connect-mongo).
- Integrated Cloudinary with Multer for cloud-based image uploads and management.
- Implemented Mapbox Geocoding API and interactive maps for location-based services.
- Designed structured MongoDB schemas with relationships (User, Listing, Review) and cascade deletion logic.
- Applied centralized error handling using custom ExpressError class and async wrapper utility.

Weather Application (*React.js, Vite, Material-UI, OpenWeatherMap API*)

- Developed a React-based weather application that fetches real-time weather data (temperature, humidity, min/max, description) using the OpenWeatherMap REST API with async/await and fetch.
- Implemented state management using React Hooks (useState) and dynamic UI rendering based on temperature and humidity conditions.
- Designed a responsive user interface using Material-UI components (Card, TextField, Button) with conditional icons and background images.
- Added client-side validation, error handling for invalid city inputs, and environment variable configuration using Vite (.env).
- Deployed the application on Vercel with production environment variables.

Personal Portfolio Website (*HTML, JavaScript, Tailwind CSS*)

- Developed a personal portfolio with dark/light mode and smooth navigation.
- Ensured cross-browser compatibility and improved UI responsiveness.
- Deployed on Vercel with ongoing improvements based on user feedback.

Education

B.Tech in Computer Science Engineering

Galgotias University, Greater Noida

2021 – 2025

CGPA: 7.06 / 10
